

Data Science Assessment AI Testified.

Following BBC News Datasets are given (Train and Test datasets). Please follow these:

- Task is to build a text classification model and text preprocessing.
- Use appropriate natural language preprocessing techniques on text and data cleaning.
- You can train a machine learning or deep learning model for this task.
- Evaluation will be based on text preprocessing, data engineering and evaluation.
- After modeling, Create an api for the file and demonstrate a strategy for cloud deployment.

Complete the task in 3 days. And please share the Jupyter file/python file.
